Professional Summary

A Full Stack Software Engineer with expertise in solutions architecture and project management, Alejandro specializes in designing and developing comprehensive, scalable systems. He excels at driving and managing projects from inception to successful implementation, ensuring technical solutions align seamlessly with business strategies. Alejandro's proficiency in leveraging cutting-edge cloud technologies and advanced artificial intelligence tools enables organizations to tackle complex challenges with innovative and secure systems. Committed to excellence, he continuously hones his skills to stay ahead in an ever-evolving technological landscape.

Technical Skills

- Solutions Architecture —designing comprehensive technical solutions, overseeing architecture and driving successful implementation.
- Programming language polyglot; OOP, C#, Python, JavaScript, R, TypeScript, SQL, PowerShell, among others.
- Proficient in data structures, algorithms, design patterns and fundamentals, as well as performance principles.
- Frameworks expertise includes .Net, Node.js, React, Entity Framework.
- Experience with databases and storage solutions such as SQL, NoSQL, Data Lake, Redis, Object Storage.
- Familiar with security, identity, and authentication practices and protocols (SAML, OAuth2.0, SSO), regulation compliance (GDPR, PII), and threat modeling.
- Proficient in AI and ML generative and analysis models, including PyTorch, TensorFlow, ChatGPT, and Azure AI.
- Cloud services expertise —particularly with Azure.
- Linux systems administration and internals.
- Experience with Infrastructure as Code (IAC) ARM and Terraform.
- Containerization and Orchestration with Docker and Kubernetes.
- CI/CD tools and practices, Azure DevOps and GitHub Actions.
- Deep understanding of network protocols and tools (TCP/IP, HTTP) and Zero Trust Network security model strategies.
- Skilled in troubleshooting, incident management, escalation, and on-call crisis response.
- Comprehensive understanding of Software Development Lifecycle (SDL), including Scrum, Agile, DevOps.

Soft Skills

- Technical project management: scoping, coordinating workflows, budgeting, and tracking deliverables.
- Workflow optimization and KPI-driven project delivery.
- Data-driven business insights, actionable metric creation from large raw data.
- Analysis, attention to detail, and problem-solving.
- Collaborative and effective cross-team communication, both technical and non-technical.
- Leadership, initiative, motivation, and accountability.
- Adaptability and a mindset focused on continuous learning.
- Security-oriented, with a focus on data privacy and ethics.
- Awareness of regulations.

Professional Experience

Software Engineer II – Microsoft

2019 – 2025

Redmond, WA

As an Engineer within the Cloud & AI organization at Microsoft, he was responsible for driving the development of high-impact, large-scale enterprise cloud applications from initial business requirements to maintenance and support. Utilized Azure cloud infrastructure, DevOps practices, CI/CD, AI/ML, and data analytics to deliver global, world-class enterprise software products. Conducted threat modeling and implemented zero-trust strategies to secure critical services and managed incident response for high-priority incidents and outages.

At Microsoft, delivered global solutions for consumer and enterprise customer support, including communication services, APIs, machine learning and intelligent automation, speech recognition and analytics, cognitive tools, and metric processing and analysis while ensuring security and information privacy.

Software Engineer - Motiv Inc. (Microsoft Vendor)

2017 – 2019

Redmond, WA

As a full stack Software Engineer, developed secure, high-throughput, cloud applications at Microsoft's Core Platform Engineering Group. Developed APIs and microservices, identified and mitigated software vulnerabilities, enforced data privacy requirements, security, and compliance, implemented DevOps processes, and hardened resources and applications to meet world-class industry standards.

Software Engineer - Getty Images

2012 – 2017

Seattle, WA

As a Software Engineer, developed and tested web services and databases handling confidential financial data and the time-sensitive royalty calculation processes. Areas of experience included .Net development, relational databases, message brokers, monitoring and integration platforms, CICD, DevOps and Agile methodologies, and on-call engineering support.

Getty Images is the global leader in multimedia and royalty services.

Software Engineer in Test - iSoftStone Inc.

2007 – 2012

Kirkland, WA

Designed and executed automated tests for web, mobile, and desktop software products. I developed unit and integration tests for web applications and APIs using automated frameworks and custom scripting. I wrote test plans and test suites, researched, and implemented test automation tools and frameworks. I led and mentored offshore and on-site testing teams.

iSoftStone is a global IT and business services provider for Fortune 100 technology companies.

Education

Bachelor of Science in Electronics Engineering

Universidad del Valle de Guatemala

Certifications

- Azure Security Engineer Associate, Microsoft
- Solutions Architecture, University of Washington
- Telecommunications and Networks, America Movil
