## Professional Summary

Senior data and software engineer with 15+ years of building secure, scalable cloud platforms and data pipelines. I translate ambiguous business and research needs into durable data architecture (Lakehouse/warehouse, ELT/ETL, data modeling), operational excellence (CI/CD, IaC, monitoring, incident response), and AI-ready data foundations (quality, lineage, governance) that enable enterprise analytics and decision-making.

## Technical Skills

- Data platform architecture: Lakehouse/warehouse patterns, secure multi-tenant design, performance and cost trade-offs.
- Data engineering: ELT/ETL frameworks, data modeling, batch/stream processing, and API-based integrations.
- DevSecOps for data: CI/CD with Azure DevOps, Drone, and GitHub Actions; strong version control and release management practices.
- Infrastructure as Code: Terraform and ARM; automation for repeatable, auditable cloud deployments.
- Azure data platform: Azure Data Factory, Synapse Analytics, Data Lake Storage, Event Hubs, Cosmos DB; Microsoft Fabric.
- AI developer tooling: Microsoft Foundry, Copilot Studio, Claude Code, GitHub Copilot.
- Languages: Python, SQL, C#, R, TypeScript/JavaScript, PowerShell.
- Data quality & governance: validation strategies, privacy-by-design, and security controls for sensitive data.
- Containers & orchestration: Docker, Kubernetes.
- Application engineering: .NET, Node.js, and FastAPI design for data products and integrations.
- Data stores: relational SQL, NoSQL, blob/object storage, caches; lake storage patterns.
- Operational excellence: troubleshooting, incident management, on-call support, and reliability improvements.
- Security: identity/auth (SAML, OAuth2.0, SSO), threat modeling, and zero-trust-aligned design.
- Compliance-minded delivery: privacy and regulatory requirements (e.g., GDPR, CCPA, HIPAA) where applicable.

## Soft Skills

- Technical project management: scoping, coordinating workflows, budgeting, and tracking deliverables.
- Industry and research experience.
- Workflow optimization and KPI-driven project delivery.
- Data-driven business insights, actionable metric creation from large raw data.
- Collaborative and effective cross-team communication, both technical and non-technical.
- Analysis, attention to detail, and problem-solving.
- Leadership, initiative, motivation, and accountability.
- Adaptability and a mindset focused on continuous learning.
- Security-oriented, with a focus on data privacy and responsible use of AI.

## Professional Experience

### Senior Software Engineer (Data and Statistical Modeling) LTE – Gates Foundation

*2025 - Current*
*Seattle, WA*

At the Institute for Disease Modeling (IDM), I collaborate closely with global health researchers to transform complex epidemiology and simulation data into effective visualizations. These tools enable the Foundation's partners to interpret research findings and support data-driven decision-making in the context of infectious disease eradication efforts.

I integrate AI into data preparation and modeling workflows with emphasis on data readiness: quality checks, privacy controls, and repeatable pipelines, engineered for direct adoption by our partner researchers in leading global health institutions and LMICs.

I drive technical planning and cross-team alignment (research, engineering, and operations), recommending platform and tooling choices, prototyping and developing backend data pipelines and APIs. I apply engineering excellence principles and DevSecOps practices (automation, CI/CD, security reviews) to improve reliability and reduce operational burden for data-heavy research workflows.

### Senior AI Solutions Consultant – Dura Digital

*2025*
*Seattle, WA*

As Senior AI Solutions Consultant, I architected and delivered AI solutions for workflow automation in healthcare. I provided clarity to complex projects and drove business value by helping organizations adopt AI for greater efficiency. Solutions were secure, scalable, and compliant, enabling streamlined processes and unlocking new operational benefits. Dura Digital is a global IT consulting and services firm dedicated to delivering business, data, and AI-driven growth solutions.

### Software Engineer II – Microsoft

*2019 – 2025*
*Redmond, WA*

I lead the end-to-end design and development of high-impact, large-scale enterprise data applications, from business requirements to maintenance and support.
Built secure data and telemetry pipelines—real time and batch—to power analytics, reporting, and operational decision-making for customer support experiences using Azure stack technologies like Azure Data Factory, Data Lake and Event Hub.
I utilized infrastructure as code, implemented CI/CD automation and release governance, and integrated AI/ML and data analytics to deliver global, world-class enterprise software products.
I conducted threat modeling and implemented zero-trust strategies to secure sensitive and confidential data, critical services and managed incident response for high-priority incidents and outages.
I delivered global solutions for consumer and enterprise customer support, including AI Services, Communication Services, APIs, machine learning and intelligent automation, speech recognition and analytics, cognitive tools, and metric processing and analysis while ensuring security and information privacy.

### Software Engineer - Motiv Inc. (Microsoft Contract)

*2017 – 2019*
*Redmond, WA*

I developed secure, high-throughput, cloud applications at Microsoft's Core Platform Engineering Group. I developed APIs and microservices, identified and mitigated software vulnerabilities, enforced data privacy requirements, security, and compliance, implemented DevOps processes, and hardened resources and applications to meet world-class industry standards.

### Software Engineer - Getty Images

*2012 – 2017*
*Seattle, WA*

I developed and tested web services and databases handling confidential financial data and the time-sensitive royalty calculation processes. Areas of experience included .NET development, relational databases, message brokers, monitoring and integration platforms, CI/CD, DevOps and Agile methodologies, and on-call engineering support. Getty Images is the global leader in multimedia and royalty services.

### Software Engineer in Test - iSoftStone Inc.

*2007 – 2012*
*Kirkland, WA*

I designed and executed automated tests for web, mobile, and desktop software products. I developed unit and integration tests for web applications and APIs using automated frameworks and custom scripting. I wrote test plans, researched, and implemented test automation tools and frameworks. I led offshore and on-site testing teams. iSoftStone is a global IT and business services provider for Fortune 100 technology companies.

## Education

### Bachelor of Science in Electronics Engineering

Universidad del Valle de Guatemala

## Certifications

- Agile Project Management, Google
- Azure Security Engineer Associate, Microsoft
- Solutions Architecture, University of Washington
- Telecommunications and Networks, America Movil
