Professional Summary

A highly skilled Full Stack Senior Software Engineer, I excel in architecting data flows and AI-powered solutions. Using deep technical knowledge, dynamic project management and communication skills, I specialize in delivering scalable, secure, and compliant solutions that transform ambiguity and raw data into clear, actionable insights for industry leaders and research decision-makers.

Technical Skills

- Solutions Architecture—designing comprehensive technical solutions, overseeing architecture, and driving successful implementation.
- Proficient in generative and analysis ML and AI tools, models, and design patterns.
- CI/CD tools and practices like Azure DevOps, GitHub Actions, and Drone.
- Experience with Infrastructure as Code (IaC) using ARM and Terraform.
- Data pipeline technology stack experience—Azure Data Factory, Synapse Analytics, Analysis Services, Data Lake Storage, Event Hub, Cosmos DB.
- Programming language polyglot: C#, Python, JavaScript, R, TypeScript, SQL, and PowerShell.
- Proficient in data structures, algorithms, design patterns, and performance principles.
- Containerization and orchestration with Docker and Kubernetes.
- Frameworks expertise includes .NET, Node.js, Entity Framework, and Microsoft Fabric.
- Experience with databases and storage solutions such as SQL, NoSQL, Data Lake, Redis, and Blob.
- Comprehensive understanding of Software Development Lifecycle (SDL), including Scrum, Agile, and DevOps.
- Cloud security and threat modeling expertise, including identity and authentication (SAML, OAuth2.0, SSO).
- Regulation-compliant implementations (GDPR, CCPA, HIPAA).
- Deep understanding of network protocols (TCP/IP, HTTP) and Zero Trust Network security model strategies.
- Linux systems administration and internals.
- Skilled in troubleshooting, incident management, escalation, and on-call crisis response.

Soft Skills

- Technical project management: scoping, coordinating workflows, budgeting, and tracking deliverables.
- Industry and research experience.
- Workflow optimization and KPI-driven project delivery.
- Data-driven business insights, actionable metric creation from large raw data.
- Collaborative and effective cross-team communication, both technical and non-technical.
- Analysis, attention to detail, and problem-solving.
- Leadership, initiative, motivation, and accountability.
- Adaptability and a mindset focused on continuous learning.
- Security-oriented, with a focus on data privacy and responsible use of AI.

Professional Experience

Senior Software Engineer (Data and Statistical Modeling) – Gates Foundation

2025 - Current
Seattle, WA

At the Institute for Disease Modeling (IDM), I collaborate closely with global health researchers to transform complex epidemiology and simulation data into effective visualizations. These visual tools enable stakeholders to better interpret research findings and support data-driven decision-making in the context of infectious disease eradication efforts. I lead the prototyping and delivery of AI-driven solutions for direct adoption by our partner researchers in leading global health institutions and LMICs. I engage in identifying gaps within research data and processes, actively seeking collaboration opportunities with experts to foster interdisciplinary partnerships, evaluate and recommend new technology adoption to maximize the Foundation's impact in the Global Health domain.

Senior AI Solutions Consultant – Dura Digital

2025
Seattle, WA

As Senior AI Solutions Consultant, I architected and delivered AI solutions for workflow automation in healthcare. I provided clarity to complex projects and drove business value by helping organizations adopt AI for greater efficiency. Solutions were secure, scalable, and compliant, enabling streamlined processes and unlocking new operational benefits. Dura Digital is a global IT consulting and services firm dedicated to delivering business, data, and AI-driven growth solutions.

Software Engineer II – Microsoft

2019 – 2025
Redmond, WA

I was responsible for driving the development of high-impact, large-scale enterprise cloud applications from initial business requirements to maintenance and support. I utilized Azure cloud infrastructure, DevOps practices, CI/CD, AI/ML, and data analytics to deliver global, world-class enterprise software products. I conducted threat modeling and implemented zero-trust strategies to secure critical services and managed incident response for high-priority incidents and outages. I delivered global solutions for consumer and enterprise customer support, including AI Services, Communication Services, APIs, machine learning and intelligent automation, speech recognition and analytics, cognitive tools, and metric processing and analysis while ensuring security and information privacy.

Software Engineer - Motiv Inc. (Microsoft Contract)

2017 – 2019
Redmond, WA

I developed secure, high-throughput, cloud applications at Microsoft's Core Platform Engineering Group. I developed APIs and microservices, identified and mitigated software vulnerabilities, enforced data privacy requirements, security, and compliance, implemented DevOps processes, and hardened resources and applications to meet world-class industry standards.

Software Engineer - Getty Images

2012 – 2017
Seattle, WA

I developed and tested web services and databases handling confidential financial data and the time-sensitive royalty calculation processes. Areas of experience included .NET development, relational databases, message brokers, monitoring and integration platforms, CI/CD, DevOps and Agile methodologies, and on-call engineering support. Getty Images is the global leader in multimedia and royalty services.

Software Engineer in Test - iSoftStone Inc.

2007 – 2012
Kirkland, WA

I designed and executed automated tests for web, mobile, and desktop software products. I developed unit and integration tests for web applications and APIs using automated frameworks and custom scripting. I wrote test plans, researched, and implemented test automation tools and frameworks. I led offshore and on-site testing teams. iSoftStone is a global IT and business services provider for Fortune 100 technology companies.

Education

Bachelor of Science in Electronics Engineering

Universidad del Valle de Guatemala

Certifications

- Agile Project Management, Google
- Azure Security Engineer Associate, Microsoft
- Solutions Architecture, University of Washington
- Telecommunications and Networks, America Movil
