Alejandro Echeverria

Senior AI and Data Solutions Engineer

aetxe@outlook.com | linkedin.com/in/cuete | github.com/cuete

Professional Summary

Senior Engineer with 10+ years of experience in AI and ML systems and 18+ years across data and software engineering. Designs and deploys production-ready AI pipelines, data platforms, and decision-support tools, embedding with domain experts to translate ambiguous business and research requirements into scalable, secure, and measurable outcomes across the full lifecycle: from proof-of-concept to high-scale production, from infrastructure to visualization, from requirements to maintenance. Owns technical architecture and mentors engineering teams through ambiguous, fast-moving problem spaces. Experience spans global health research, healthcare, customer support, and enterprise software.

Technical Skills

AI & ML: LLMs, AI agents and multi-agent systems (supervisor orchestration), agentic BI, RAG, NLP, MLOps; OpenAI and Anthropic Claude SDKs, Azure AI Foundry, LangChain, LangGraph, Databricks; hybrid search (vector + BM25/RRF), embeddings, knowledge graphs, document ingestion and OCR; model selection, evaluation, A/B testing, and LLM-based quality scoring; prompt, context, and token optimization (FinOps for AI); Responsible AI and guardrails; AI-assisted development (Claude Code, GitHub Copilot, Codex).

Data & Cloud: Azure (Data Factory, Synapse, Analysis Services, Data Lake, Event Hub, Service Bus, Event Grid, Cosmos DB, AI Search, Container Apps, Blob Storage), Microsoft Fabric; PostgreSQL, SQLite, Redis, pgvector, sqlite-vec; ETL/ELT, data modeling.

Languages & Frameworks: Python, C#, TypeScript, JavaScript, React, R, SQL, PowerShell; .NET, Node.js, FastAPI, GeoPandas (geospatial and geolocation data analysis, mapping).

Infrastructure & DevOps: Docker, Kubernetes; Azure DevOps, GitHub Actions, Drone; Terraform, Bicep, ARM; REST APIs, async/parallel pipelines, caching for AI services.

Architecture & Security: Solutions architecture, design patterns, algorithmic complexity and performance optimization at scale; threat modeling, SDL, Zero Trust, firewalls, subnetting, OAuth 2.0, SAML, SSO; GDPR, CCPA, HIPAA.

Soft Skills

Leadership: Technical strategy ownership in ambiguous problem spaces; cross-functional alignment from engineering to executive stakeholders; mentorship and technical leveling of engineering teams; recovering at-risk cross-functional projects by resolving disconnects between technical teams and domain experts.

Communication: Translating technical tradeoffs into clear recommendations for non-technical decision-makers; trusted advisor role in AI adoption for regulated domains; rapidly acquiring domain knowledge (customer support, epidemiology, global health) and translating it into production requirements.

Professional: Security-first mindset; responsible AI and data privacy focus; bias toward measurable outcomes over process.

Personal Projects

Legal Document Intelligence System
2025 - Current

- Built a production RAG system over ~5,100 case documents and ~1,450 statutes and court rules (~83,000 chunks); multi-format extraction with OCR, hybrid lexical (FTS5/BM25) and semantic (sqlite-vec) search, and minimum-score thresholds that keep agent answers grounded in retrieved sources; chunk-level retrieval scored 13% higher precision than single-doc embeddings at sub-200ms latency.
- Designed a multi-agent assistant with supervisor orchestration that routes work to specialized agents (code, legal, research) by task type and cost.
- Built custom MCP servers giving the agents access to document sources (chat, email, and file storage) to provide them with one safe, shared access point.

Semantic Analysis Platform
2026 - Current

- Built a full-stack document intelligence platform (FastAPI + React) for multi-source ingestion, semantic chunking, and concept-graph extraction/merging; includes a fact-check feature that verifies claims via Perplexity, evaluates AI-generated suspicion score, and feeds results into a document quality score. Displays semantic representations of the document with three synchronized views (concept map, chat, document).

Shared Agent Context Store
2026 - Current

- Building a single context store that AI agents across different clients and devices read and write through one remote MCP server, replacing separate per-tool memory files; deployed on Azure Container Apps with SQLite storage, lexical, fuzzy, and semantic search, token authentication, and encryption for sensitive data.

Professional Experience

Senior Software Engineer (Data and Statistical Modeling) - Gates Foundation
2025 - 2026
Seattle, WA

- Architected AI-powered epidemiology dashboards, including geospatial analysis and mapping of geolocation and disease data with GeoPandas, for national malaria eradication programs in Nigeria, Senegal, and Benin; surfaced disease indicators, intervention cost-effectiveness, and scenario simulations used by health ministries to drive policy decisions.
- Built a RAG-based agentic BI pipeline (Anthropic and OpenAI SDKs) that ingested raw epidemiology data and converted it into decision-support analyses and interactive, PostgreSQL-backed visualizations through a conversational interface for public health researchers and partner institutions.
- Applied production AI practices across the full pipeline: data quality controls, privacy-by-design, prompt engineering, evaluation pipelines, and DevSecOps for global health research environments.
- Led cross-functional technical planning across research, engineering, and operations; translated epidemiology requirements into production AI systems adopted by partner institutions.

- Took over a stalled Nigeria health facility budget analysis pipeline mid-project, embedding with public health researchers to reconcile a disconnect between the pipeline's technical capabilities and the analysis methodology; designed a retrofit plan aligned to the available data and brought the project back on schedule.

Senior AI Solutions Consultant - Dura Digital

2025 - Current
Seattle, WA

- Provided architectural direction and implementation strategy for healthcare and financial organizations adopting ML/AI tooling and infrastructure; serving as trusted technical advisor during early AI adoption phases.
- Identified key constraints and designed implementation roadmaps to bridge gaps between existing infrastructure and planned AI-focused architectures, enabling clients to move from strategy to production with clear milestones.
- Delivered secure, scalable, and compliant AI solutions for workflow automation, translating ambiguous business requirements into actionable technical plans with measurable outcomes.

Software Engineer II - Microsoft (Customer Experience)

2019 - 2025
Redmond, WA

- Designed and shipped frontier ML/AI speech-to-text systems for enterprise customer support, reducing agent oversight overhead by 50% through intelligent automation and real-time AI assistance with KB retrieval.
- Built real-time and post-call customer satisfaction metric pipelines and visualization tools, enabling live supervisor awareness and KPI rollup evaluation across global support operations.
- Architected and delivered large-scale cloud-native enterprise applications and event-streaming pipelines using Azure infrastructure (Data Factory, Event Hub, Service Bus, Event Grid, Data Lake, Cosmos DB), DevOps practices, and CI/CD automation.
- Conducted threat modeling and implemented zero-trust security strategies to protect critical services and sensitive customer data; managed incident response for high-priority production outages.

Software Engineer - Motiv Inc. (Microsoft Contract)

2017 - 2019
Redmond, WA

- Built secure, high-throughput NLP ML cloud applications at Microsoft's Core Platform Engineering Group: APIs and microservices, vulnerability mitigation, data privacy compliance, DevOps, and security hardening.

Software Engineer - Getty Images

2012 - 2017
Seattle, WA

- Developed and tested web services and databases for financial data processing and royalty calculations: .NET, relational databases, message brokers, monitoring platforms, CI/CD, and on-call engineering support.

Software Engineer in Test - iSoftStone Inc.

2007 - 2012
Kirkland, WA

Designed and executed automated test suites for web, mobile, and desktop products at Fortune 100 technology clients. Built unit and integration test frameworks, wrote test plans, and led offshore and on-site QA teams.

Education

Bachelor of Science in Electronics Engineering

Universidad del Valle de Guatemala

Certifications

- Building with the Claude API, Anthropic
- Agile Project Management, Google
- Azure Security Engineer Associate, Microsoft
- Solutions Architecture, University of Washington
- Telecommunications and Networks, America Movil
