Professional Summary

A Senior Software Engineer specializing in deploying AI solutions directly with customers and research partners. I embed with domain experts to translate complex, ambiguous problems into production-grade AI systems—rapidly iterating from prototype to adoption. I bridge technical and non-technical teams, turning real-world pain points into scalable, secure, and compliant AI-powered tools. My work spans global health research, healthcare, and enterprise environments.

Technical Skills

AI & ML: Generative and analytical ML/AI, LLMs, AI agents, multi-agent systems, intelligent automation, design patterns; prompt engineering, prompt optimization, and token cost management (FinOps for AI); model selection and right-sizing strategies; Retrieval-Augmented Generation (RAG); latency optimization and performance benchmarking; model evaluation and A/B testing; Azure OpenAI; AI guardrails and Responsible AI practices.

Scalability & Performance: Distributed AI pipeline design; horizontal scaling with Kubernetes; streaming AI workloads (Event Hub); async/parallel pipeline architecture; caching strategies for AI services; Azure AI cost monitoring and budget governance.

Data & Cloud: Azure Data Factory, Synapse Analytics, Analysis Services, Data Lake Storage, Event Hub, Cosmos DB, Microsoft Fabric; SQL, NoSQL, Data Lake, Redis, Blob.

Languages: Python, C#, JavaScript, TypeScript, R, SQL, PowerShell.

Infrastructure & DevOps: Docker, Kubernetes; Azure DevOps, GitHub Actions, Drone; ARM, Terraform (IaC).

Architecture & Frameworks: Solutions Architecture; .NET, Node.js, Entity Framework; TCP/IP, HTTP, Zero Trust Network; SDL, Scrum, Agile, DevOps.

Security & Compliance: Threat modeling, SAML, OAuth2.0, SSO; GDPR, CCPA, HIPAA; Linux systems administration and internals.

Soft Skills

Customer & Delivery: Translating ambiguous customer and research needs into working technical solutions; fast iteration in customer-facing environments; cross-team communication with both technical and non-technical stakeholders; technical project management.

Analysis & Insight: Data-driven business insights; actionable metric creation from large raw data; attention to detail and problem-solving.

Professional: Leadership, initiative, motivation, and accountability; security-oriented, with a focus on data privacy and responsible use of AI; adaptability and continuous learning mindset.

Professional Experience

Senior Software Engineer (Data and AI) – Gates Foundation

2025 - Current

Seattle, WA

Embedded with global health researchers at the Institute for Disease Modeling (IDM), I work directly with domain experts to translate complex epidemiology and simulation data requirements into production AI-driven solutions. I lead rapid prototyping and delivery of AI tools adopted by partner researchers at leading global health institutions and LMICs—iterating closely with users from concept to deployment. I identify gaps in research data and processes, seek collaboration with domain experts to bridge technical and scientific knowledge, and evaluate and recommend new technologies to maximize the Foundation's impact.

Senior AI Solutions Consultant – Dura Digital

2025

Seattle, WA

Embedded with enterprise clients to provide architectural guidance and deliver AI solutions. I led the end-to-end architecture for a regulated Azure AI Foundry deployment at a major Canadian financial institution — translating complex regulatory requirements (PIPEDA, BCFS data sovereignty) into a concrete multi-region technical design, identifying critical gaps in the existing implementation roadmap, and providing effort estimates across 13 interdependent tasks. Work spanned governance, zero-trust security, private networking, MuleSoft Flex Gateway integration for Claude model routing, and compliance observability. Dura Digital is a global IT consulting and services firm dedicated to delivering business, data, and AI-driven growth solutions.

Software Engineer II – Microsoft

2019 – 2025

Redmond, WA

I drove development of high-impact enterprise AI products from business requirements to production, including AI Services, intelligent automation, speech recognition and analytics, and cognitive tools serving

global users. I integrated AI/ML capabilities into cloud-native applications, conducted threat modeling, implemented zero-trust security, and managed incident response for high-priority production outages.

Software Engineer - Motiv Inc. (Microsoft Contract)

2017 – 2019

Redmond, WA

I developed secure, high-throughput cloud applications at Microsoft's Core Platform Engineering Group. I built APIs and microservices, identified and mitigated software vulnerabilities, enforced data privacy requirements, and implemented DevOps processes to meet enterprise-grade security and compliance standards.

Software Engineer - Getty Images

2012 – 2017

Seattle, WA

I developed and tested web services and databases handling confidential financial data and time-sensitive royalty calculation processes. Areas of experience included .NET development, relational databases, message brokers, monitoring and integration platforms, CI/CD, DevOps and Agile methodologies, and on-call engineering support. Getty Images is the global leader in multimedia and royalty services.

Software Engineer in Test - iSoftStone Inc.

2007 – 2012

Kirkland, WA

I designed and executed automated tests for web, mobile, and desktop software products. I developed unit and integration tests for web applications and APIs using automated frameworks and custom scripting. I led offshore and on-site testing teams for Fortune 100 technology clients.

Education

Bachelor of Science in Electronics Engineering

Universidad del Valle de Guatemala

Certifications

- Agile Project Management, Google
- Azure Security Engineer Associate, Microsoft
- Solutions Architecture, University of Washington
- Telecommunications and Networks, America Movil
